Waste management policy

Institute has designed and integrated waste management system for optimizing and analyzing waste it is based on the concept that all the aspects of waste management should be analyzed together the institute is conscious of its activities generating waste and insurance that all the waste is used and disposal responsibly.

1. Waste management practices is divided into 3 parts:

- Solid waste management waste generation segregation and collection is processor systematically in separate beans at source and identified as biodegradable non-biodegradable and hazardous waste generated from kitchen canteen is treated in house through organic waste composter and waste is created into manure no biodegradable solid waste is handed over to the municipal approved land field site of oil to authorized recycler.
- Liquid waste management grey water and Black water generated is discharge to municipal municipality severe line through line of network which gets treated by authority at zone level WTP.
- E waste management discarded electronic devices such as old desktops, printers, mobiles and machines to be sold to authorized recycler vendor.

2. Hierarchal approach of waste by reducing reusing and recycling.

- Reduce the toxicity or negative impacts of the waste that is generated.
- Reduce the volume of waste prior to disposal.
- Reuse in the current forms the material recovered from the waste stream.

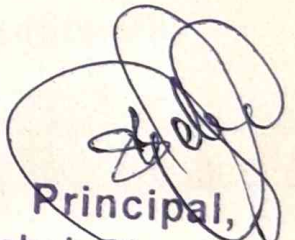

Principal,
Appasaheb Birnale College

- Recycle compost or recover materials for use as direct or indirect inputs to new products.
3. Provide clear and defined rolls and responsibilities within the waste management chain to authorized administrator.
 4. Promote and use e-Learning tools vital for enhancement for communication to control usage of paper.
 5. The campus is no plastic campus to minimize plastic use.
 6. Organized waste management programme and activities to aware communities at large.

Additionally staff student and faculty must be properly educated on waste management practices.
